

Synergi® - Skanska's only alternative

Skanska is one of the world's leading companies for construction-related services and project development. Skanska aims at being a leader in safety, ethics and environmental issues.

Benefits of Synergi® for Skanska

- Synergi® made the H1 factor (lost time injury) fall from 22 to 5 in three years.
- Synergi® provides Skanska with a competitive edge, especially when working with main clients in the safety-focused oil and gas industry, as these proactive companies use Synergi® as well.
- Synergi® is decisive for Skanska's ability to prevent accidents with the cost reduction benefits of billions of NOK that implies.

"Skanska is the second biggest construction company in Norway, with around 4100 employees. Synergi® is the only integrated business solution I know that we can use to manage and reduce operational risk. It has definitely contributed to our falling rate of serious incidents. Now we are working on putting Synergi® into use in other countries where Skanska operates as well."

Mr. Arild Berglund, HSE Manager

Pride ASA has implemented the software, and is now working on new solutions satisfying Skanska's particular needs, for example for reporting via PDAs. The company's IT department claims this is one of the most successful IT projects they have ever been involved in. It reports reliability, stability and excellent service.

Synergi® is an invaluable tool in Skanska's HSEQ work in general and plays an important role, not only financially, but also in maintaining Skanska's good reputation and overall branding. Synergi-generated reports are important tools for the management in making all employees more HSEQ-aware and thereby fulfill their aims.

About Skanska

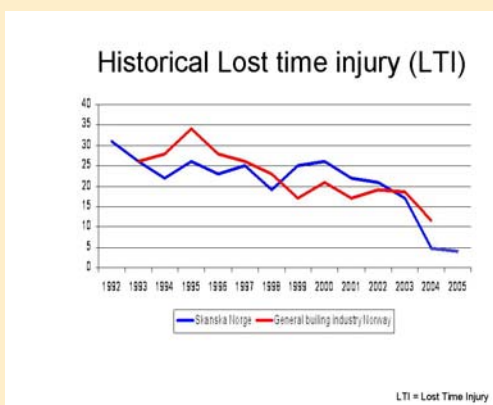

Holds companies in Sweden, Norway, Denmark, Finland, USA, UK, Poland, the Czech Republic and Latin America with a total of about 54.000 employees.

Challenge

No satisfying system for registering, managing and analysing risk management – hence difficult to monitor results, as required according to Norwegian law.

Solution

Implementation of Synergi® for gathering all relevant information and possibility to take action before accidents happen.

Skanska in Norway implemented Synergi® in 2001. The H1 factor (lost time injury) then fell from 22 to 5 in 2004

Pride ASA is involved in assisting their customers put Synergi® into proper use at all stages. Pride's HSEQ consultants have considerable experience from the oil and gas, transport, communications, process, building, construction industries and the public sector. And of course they know Synergi® from A to Z.
